ABSTRACT

A charged particle beam microscope is described, which is equipped with a

- minicolumn. Various embodiments are disclosed suitable for various uses.
 - According to one embodiment the minicolumn is situated inside a mini-environment
- and can be introduced and withdrawn from the main vacuum chamber. According to

other embodiments, the minicolumn is situated inside the main vacuum chamber.

According to further embodiments, a turntable stage is used and the minicolumn is attached to an arm movable in the radial direction of the turntable.
